

Lobster Pot

Fully managed high quality **time lapse** photography and **site monitoring**

The industry standard

The Lobster Pot sets a new benchmark for high quality, easy to install time lapse and monitoring cameras.

The Lobster Pot is fully-managed, from initial reconnaissance and safe installation, configuration with your own website and displays, right through to removal and production of professionally edited high definition films.

Fully monitored

Every Lobster Pot is monitored from our HQ. We have full control over all cameras to adjust interval time and image settings. Our cameras are extremely robust and reliable, working faultlessly all over the world.

Best quality, no fuss

Lobster Pot Cameras shoot high quality, grain free time lapse images, day or night - at a resolution well above HD. They are integrated with Lobster Vision - enabling you to view, share and save high quality images, from any web browser.

Connection, no cables

The Lobster Pot uses the cellular 3G network - so it doesn't need to be hard-wired into a site network. This provides a secure, ultra-reliable and guaranteed connection. Where cellular isn't available, our experienced engineers can deploy long-range secure wireless networks.

Our relentless pursuit of the highest standards in engineering, image quality and customer service makes the Lobster Pot system the best in the world for time lapse and monitoring.

Professional quality

Using pro-level cameras and lenses means you have the very best quality imagery, anywhere. Use for HD video or magazine print.

Install anywhere

Because Lobster Pots don't need a network connection, they're easy to install and configure on any site.

Day or night

Lobster Pot cameras can shoot long exposure in very low light - showing your site in great detail, at any time.

Always connected

Using an ultra-reliable, monitored 3G connection means your cameras are on our secure network - all the time.

Lobster Vision

View, share and show off - any site, from **anywhere**

Lobster Vision is used by clients worldwide for viewing, sharing, collaborating and publicising construction and engineering sites. It's a unique and invaluable tool, used by project directors and managers, surveyors, media professionals and the general public. It works exclusively with Lobster Pot camera systems.

From boardroom to browser

Lobster Vision shows all the pictures from your Lobster Pot Camera, right up to the last minute. The superb high resolution means that you can display this on a giant screen with no loss of sharpness. It's the best way to show your site - anywhere. Major corporations, art galleries and global engineering clients have used Lobster Vision to publicise their work.

View, share, collaborate

Lobster Vision lets you see your site - anywhere. The calendar functionality, precise navigation controls, and date-stamped imagery, lets you check progress, make sure goals are met and collaborate with stakeholders globally.

Site integration

Lobster Vision can be used to integrate images and video - updated hourly - right into your own website.

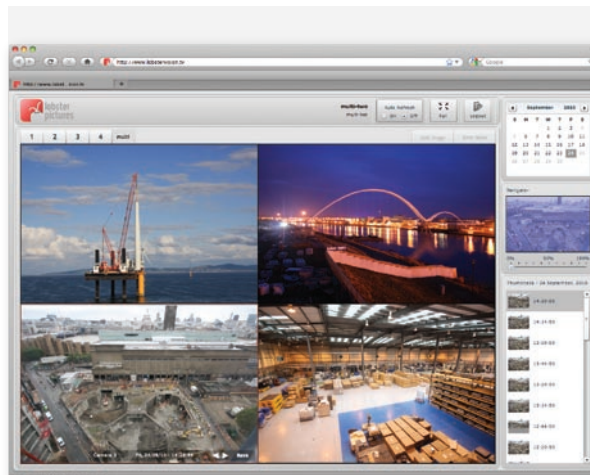

Key benefits

- View live and archive site images via the internet from any web browser.
- Improve project collaboration and communication
- Verify project milestones
- Monitor progress on site remotely
- Monitor weather and site conditions
- Monitor deliveries to site
- Marketing and PR tool

Fine detail

Lobster Pot cameras work at resolutions up to 21 megapixels. This means you can zoom right in and pan around, with no loss of clarity. Pictures are high enough quality for magazine publication, and can be downloaded straight from Lobster Vision.

Multiscreen

Lobster Vision can show one camera or many - all from the same screen. Great for showing off all your sites from one monitor - in boardrooms, reception areas and galleries.
